A COPD treatment that lets you know when you are using the inhaler correctly.

HOW TO USE THE TUDORZA PRESSAIR INHALER FOR COPD

1. READY  BEFORE INHALATION
   - Remove the protective cap by lightly squeezing the arrows marked on each side and pulling outwards.
   - Hold the TUDORZA PRESSAIR inhaler with the mouthpiece toward you and the green button facing straight up. Do not tilt.
   - Press the green button all the way down and release.
   - Do not hold the green button down. Stop and check to make sure the dose is ready for inhalation.
   - Check to see if the color of the control window has changed from red to green.
   - The green control window confirms that your medication is ready for inhalation.

2. CLICK  DURING INHALATION
   - Put your lips tightly around the mouthpiece of the TUDORZA PRESSAIR inhaler. Take a strong, deep breath. A "click"* sounds during inhalation when the inhaler is used correctly. Keep breathing in, even after you have heard the "click",* to be sure you get the full dose. Remove the TUDORZA PRESSAIR inhaler from your mouth and hold your breath as long as possible. Then slowly breathe out, away from the inhaler.

3. CONFIRM  AFTER INHALATION
   - Make sure the control window has turned from green to red. This "confirms" that you’ve inhaled your full dose correctly. If the window did not change to red, you may have forgotten to remove your finger from the green button before inhaling, or you may not have inhaled correctly. If this happens, go back to Step 2 and repeat the dosing instructions.
   - Once the control window has turned red, place the protective cap back onto the mouthpiece of the TUDORZA PRESSAIR inhaler.

*Note: some people may not hear the click

INDICATIONS AND USAGE
TUDORZA PRESSAIR is a prescription medicine to treat chronic obstructive pulmonary disease (COPD). COPD is a long-term (chronic) lung disease that includes chronic bronchitis, emphysema or both.
TUDORZA is not a rescue medicine and should not be used for treating sudden breathing problems. Your doctor may give you other medicine to use for sudden breathing problems.

IMPORTANT SAFETY INFORMATION
Who should not use TUDORZA PRESSAIR?
Do not use TUDORZA PRESSAIR if you have a severe allergy to milk proteins, or are allergic to aclidinium bromide, or any of the ingredients in TUDORZA PRESSAIR. Ask your healthcare provider if you are not sure.

What should I tell my doctor before using TUDORZA?
Before you use TUDORZA, tell your doctor about all your medical conditions, including if you have eye problems (especially glaucoma), prostate or bladder problems, or problems passing urine. TUDORZA may make these problems worse.
Tell your doctor about all the medicines you take, including prescription and non-prescription medicines and eyedrops. Especially tell your doctor if you take anticholinergics (including tiotropium, ipratropium) or atropine.
Do not use TUDORZA more often than prescribed or take more medicine than prescribed for you.

Please see additional Important Safety Information on reverse side and accompanying full Prescribing Information.
**USEFUL TIPS - Help manage COPD over the long term**

### Stick to your treatment plan
Follow your doctor’s advice on how and when to take medication. Remember to always use the inhaler correctly for best results.

### Get regular checkups
Schedule a few visits with your doctor every year — even if you feel fine! Checking in can help you know if you’re on the right treatment plan.

### Stay active and eat right
Make sure you stay active and eat right. It can be good for your body. A simple way to start is to take walks and eat a balanced diet.

### When you have COPD, quitting smoking is the most important step you can take
If you find it difficult, reach out to a doctor for a professional recommendation.

**IMPORTANT SAFETY INFORMATION (CONT’D)**

**What should I tell my doctor before using TUDORZA? (cont’d)**
Seek immediate medical help if your breathing problems worsen with TUDORZA, you need to use your rescue inhaler more often than usual, or your rescue inhaler does not work as well for you.

**What are the possible side effects of TUDORZA?**
TUDORZA can cause serious side effects. Stop taking TUDORZA and seek medical help right away if you experience:
- Sudden shortness of breath immediately after use of TUDORZA
- New or worsened symptoms of increased pressure in your eyes (acute narrow-angle glaucoma), which may include eye pain, nausea or vomiting, blurred vision, seeing halos or bright colors around lights, or red eyes. Using only eyedrops to treat these symptoms may not work and if not treated, this could lead to permanent loss of vision
- Symptoms of new or worsened urinary retention (difficult, painful, or frequent urination, or urination in a weak stream or drips)
- Serious allergic reactions including rash, hives, swelling of the face, lips, tongue, or throat; breathing problems; and itching

**What are the most common side effects of TUDORZA?**
The most common side effects of TUDORZA include headache, common cold symptoms, and cough. In a long-term cardiovascular safety trial of up to 3-year, the adverse reactions (occurring at a rate of ≥2% and more common than placebo) were nausea, back pain, cough, hypertension, sinusitis, constipation, arthralgia, anemia, muscle spasms, cardiac failure congestive, cellulitis, and gastroesophageal reflux disease. These are not all the possible side effects with TUDORZA.
